VBEND
HOW IT WORKS

The internet can be a dangerous place for children. The increasing connectivity of today's society makes it inevitable that children will go online it's where they study, where they play and where they connect with friends.

VBend has been keeping families safe creating a safe wifi network within the home for the last 2 years. It is due to a large demand by our customers that we decided to build the VBend app that will keep the device safe online even when leaving the safe home environment.

How does the VBend app work?

The VBend app creates a safe pathway for all incoming and outgoing internet to and from the device. Think of the VBend app as creating a safe tunnel for the internet to flow through which no one can access; not even the service provider that provides the internet. This provides a true secure environment for children.

The filtering of the internet does not take place on the device itself. It happens on the VBend servers which means no one can bypass the service.

The VBend app cannot be stopped nor uninstalled from the device without a password which makes it even more secure.

**The VBend app is now available on Android as well Apple devices.**

Once the VBend app is installed, there is no more requirement to do any on device child settings, which is a big relief for parents not being in touch with technology as the millennials of today.

Internet with VBend

Safe pathway for all
incoming and outgoing
internet to and from the device

Internet without VBend

Unsafe pathway where
Cybercriminals and Spies
can access your internet

Be proactive, act now, and keep your family safe!
